

HONEYCOMB SERIES

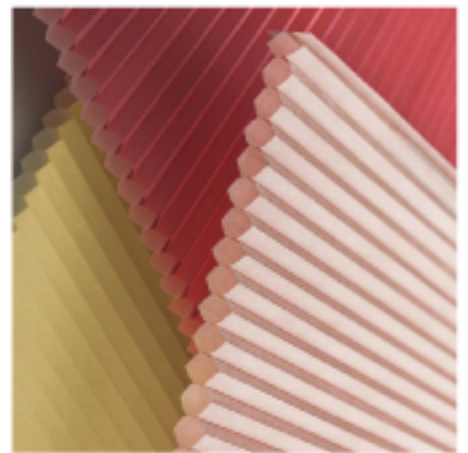

INSPIRED BY NATURE

For over 3.8 million years, nature has engineered structures which are perfectly suited to their purpose. The honeycomb structure used by bees to store honey, exemplifies stability and optimal functionality. It has provided an excellent source of inspiration and was influential in the development of Honeycomb fabrics.

HEXAGONAL COMPACTNESS

Honey is stored by bees in hexagon-shaped cells because they are super strong and fit together perfectly without leaving gaps. In window coverings, a honeycomb fabric acts as a blanket with air pockets in front of the window.

IMITATIONS OF NATURE

We imitate the models, systems and elements of nature for the purpose of solving human problems. Our Honeycomb fabrics are the perfect example of this imitation, called biomimicry.

ACOUSTIC COMFORT

Honeycomb blinds, are great for reducing noise because of their honeycomb construction. Just as they capture and trap the light coming through the windows, they can help keep some of the noise from coming into your home.

UNIFORM LOOK FROM THE OUTSIDE

All fabrics in this collection have a white back, which creates a uniform look on the outside of the building. The white back also helps to increase the level of light and heat reflection.

ENERGY SAVINGS

STYLISH FUNCTIONALITY

Honeycomb fabrics achieve excellent insulating properties due to their cellular structure. Within the home, a significant amount of heat is lost through the windows, even when double glazed. On lowering the Honeycomb shade, air is trapped inside the cells, acting as an insulation blanket in front of your window. In winter it has been proven to reduce heat loss by 46% and in summer to reduce heat absorption by 78%.

46% REDUCTION OF HEAT
LOST IN WINTER

78% REDUCTION OF HEAT
ABSORPTION IN SUMMER

12% UP TO 12% ENERGY SAVINGS
THROUGHOUT THE YEAR

WEATHER CONTROL

Honeycomb fabrics are adept at regulating temperature throughout the year. In summer, heat generated from solar energy can result in unpleasantly high temperatures indoors. The honeycomb structure helps reflect the solar rays and keep out as much heat as possible. In winter the fabrics help control the solar heat by retaining the warmth.

SUSTAINABILITY

LOW WEIGHT, GOOD MATERIALS AND A LONG LIFETIME.

Sustainability is at the forefront of everything we do. With increased awareness of the world's depleting resources, we strive to minimise our impact on ecosystems by effectively managing our energy consumption and raw materials through efficient operating processes, products and services.

PRIVACY

CREATE THE PERFECT ENVIRONMENT

The level of privacy provided by Honeycomb blinds is determined by the transparency of the fabric. It defines the extent to which people can see through the fabric, both from the inside out and outside in. The blackout Honeycomb fabrics block out light and provide the ultimate privacy, making them perfect for bedrooms.

HONEYCOMB NATURE WEAVE

STYLISH , WOVEN FABRIC WITH TEXTILE
LOOK AND FEEL

HONEYCOMB NATURE WEAVE

Transparent, high - quality woven fabric
Honeycomb Nature Weave has a coarse
weaving texture that creates a refined linen
look. The slub yarn in this fabric offers a
distinctive visual effect.

HONEYCOMB DIMOUT

LUXURY FABRIC WITH A PURE AND
TIMELESS LOOK

HONEYCOMB DIMOUT

Honeycomb Dimout is a truly unique semi-transparent fabric, noted for its sophisticated linen look. The honeycomb structure encompasses a white, non-woven back, combined with a coloured textile front. As a result, this fabric diffuses the incoming light beautifully. Honeycomb Dimout is available in many natural colours. Ideal for achieving a luxurious atmosphere in the home or office.

HONEYCOMB OPAQUE

THE PERFECT ESSENTIALS FOR ANY
FUNCTIONAL COLLECTION

HONEYCOMB OPAQUE

Blackout fabric Honeycomb Opaque is the perfect choice when maximum functionality is required. Thanks to its honeycomb structure, the fabric has excellent insulating properties. The silver coating on the inside of the cells creates a maximized insulation effect. The optical white back side ensures maximum heat and light reflection.
